

CALCULATING IV DRIP RATES

Drop Factor

Number of drops in one milliliter of solution

Microdrip

For small or precise infusions; 60 gtt/mL

Macrodrip

For quick or large infusions; 10-20 gtt/mL

Calculating number of mL to infuse per hour

$$\frac{\text{Volume (mL)}}{\text{Time (hours)}} = \text{mL per hour}$$

$$\frac{1,000 \text{ mL}}{8 \text{ hours}} = 125 \text{ mL per hour}$$

Calculating IV flow rate in drops per minute

$$\frac{\text{Volume (mL)}}{\text{Time (min)}} \times \text{Drop Factor (gtt/mL)} = \text{IV flow rate in drops per minute (gtt/min)}$$

$$\frac{1,000 \text{ mL}}{8 (60)} \times 15 \text{ gtt/mL} = 31.25, \text{ which rounds to } 31 \text{ gtt/min}$$

Quick tip:

When IV tubing is microdrip (60 gtt/mL), the drops per minute will be the same as the mL per hour!

INTRODUCTION TO THE JOINT TRAUMA SYSTEM JTS

The Joint Trauma System JTS is the Department of Defense DoD authority for the military's trauma care system. The vision of the Joint Trauma System is that every Soldier Sailor Marine and Airman injured on the battlefield will have the optimum chance for survival and maximum potential for functional recovery. To achieve this vision in 2006 the JTS implemented programs for data driven trauma system development and improvement in addition to the collection of trauma data. As part of its data collection efforts the JTS maintains a registry of trauma patients who received care at medical treatment facilities MTFs. Since 2007 this registry known as the DoD Trauma Registry DoDTR has documented demographic injury treatment and outcomes data for all trauma patients admitted to any DoD MTF regardless of whether the injury occurred during on going military operations and is the largest military trauma data source in the world. Development of the DoDTR began during the early years of the Global War on Terror GWOt when the need to systematically improve trauma care for combat wounded resulted in the impromptu creation of a demonstration registry known then as the Combat Trauma Registry CTR. The CTR was constructed by the Center for AMEDD Strategic Studies CASS. Trauma related information was initially abstracted into it from paper medical records received from trauma nurse coordinators TNCs at Landstuhl Regional Medical Center LRMC in Germany. Shortly after the demonstration program started the Army Surgeon General approved its transition to an operational mode leading to the formation of the Joint Theater Trauma System JTTs and eventually the Joint Trauma System JTS.
